

# The B2 Paramedic Helmet

The **B2 Paramedic Helmet** is lightweight and low profile for use in confined quarters. It protects you inside or outside of the ambulance without getting in your way.

Engineered by Bell Racing, who created the company B2 Helmets to better serve EMS providers. The B2 Paramedic Helmet offers the protection EMS professionals deserve with the confidence of advanced design and superior quality.

*Advanced Features include;*

- 3mm Injection Molded Polycarbonate Visor
- Curved design with nose cutout can accommodate respirators
- Lightweight composite Carbon/Kevlar Shell
- F1 Liner Technology – Multi-density liner design from the advanced F1 Racing Helmet.
- Removable / Replaceable fit pad system
- 3M Reflective Tape for enhanced visibility
- Quick release padded chin strap with steel buckle
- Retention system allows use of stethoscope or communications
- DOT FMVSS 218 Certified
- Available in Navy Blue and Royal Blue
- 3 sizes will fit sizes 52 to 63cm (XXS to XXL)

Here are a few facts; Firemen don't go anywhere without a helmet. Skateboarders and bicyclists wear helmets. But folks playing dancing bear in the back of a moving ambulance don't wear any head protection.

*Aren't you worth at least the same level of head protection you would insist on for your child driving a go-cart?*

There is only one rational standard supported by the CPSC for Paramedic use in a [Wheeled, Large Motor-Vehicle](#). FMVSS 218, the DOT Standard.

The B2 Paramedic Helmet is the only EMS helmet built to a motor-vehicle safety standard. Three shell sizes each with different fit pads assure a comfortable custom fit. Rugged, ultra light Kevlar & Carbon fiber shell with advanced composite liner technology.

Only about 1.5 inches thick and 1.5 pounds. Padded quick-release chin strap, and complete access to the ears. The double-curved injection molded visor is compatible with eyeglasses and respirator.
