

# Aeromed Advanced Pack

**The Aeromed Advanced combines some of our most innovative features from our Aeromed and ALS pack, and includes a newly designed complete airway section.**

The Aeromed Advanced Pack is the most compact and space efficient advanced life support pack on the market. The perfect response pack for all paramedics and EMT- I's.

Slightly larger in size than our top selling Aeromed pack, the Aeromed Advanced includes a large front pocket designed to accommodate both a complete adult and pediatric BVM resuscitator.

The inside base of the pack contains both Thomas' removable "quick-pull" fully self-contained I.V., pouch as well as a removable drug kit. The I.V. pouch (identical to the I.V. pouch found in the Thomas Advanced Life Support Pack) is capable of holding all the necessary equipment to start a peripheral intravenous line, including 1000 ml of liquids, 6 I.V. catheters, tubing, pressure infuser, gauze, and swabs. The contents of each pouch can also be set up differently to accommodate adult or pediatric patients.

The complete airway section consists of a large deep vinyl pocket capable of holding up to 20 ET tubes of various sizes and shapes; a blade and accessory section designed to securely hold the laryngoscope handle and up to 8 laryngoscope blades (pictured with both Macintosh and Miller blades)

The Aeromed Advanced comes complete with two additional storage vinyl pockets in the airway section for airways and other accessories (batteries, bulbs, adapters, etc..) Other accessories and tools may be stored in the small side support pockets which have been enlarged to accommodate, if desired, two additional fully contained I.V. pouches (as pictured above). The pack also includes three D rings on the back that allow shoulder straps to be easily attached for transport. Also included in the interior and providing structural support for the pack is a Redi-Splint, which can be easily removed for emergency use when needed.

Dimensions: 12" x 14" x 6"

This Thomas small removable drug kit designed to transport, protect, and store dozens of necessary medications. Specifically designed to allow some medications to be stored and transported in the "boxed" form, the preferred method of many EMT's today. Similar to our original padded drug box, the mini drug kit is protected by two pieces of polycarbonate plastic and two pieces of 1/2" of self-enclosed Evazote foam. The middle interior of the pack is finished with two color coded vinyl pockets for additional storage and rapid location of equipment and easy re-stocking.

Finally a small, organized, compact pack with complete I.V., medication, and airway compartments!!!!

Item #	Description	Price
