What is Fentanyl?

- The most potent opioid available for medical treatments but is being illegally produced and sold as heroin.
- The DEA has deemed it as an “unprecedented threat” with concern for accidental exposure within EMS, police and ER environments.
- A Class II Incapacitating Agent per the CDC which is 8000% more potent than morphine.
- It can be absorbed through the skin with mild to severe/fatal effects within seconds of contact.

*no permeation found over the duration of the test period (240 minutes)
